EXP 4: Create UDF (User Defined Functions) in Apache Pig and execute it in MapReduce / HDFS mode

AIM:

To create UDF in Apache Pig and execute it in MapReduce/HDFS mode.

PROCEDURE:

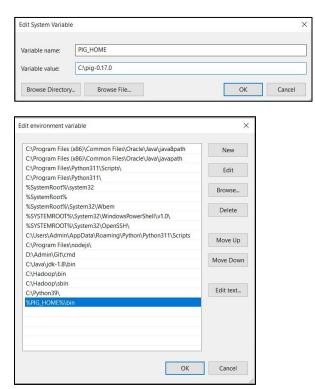

Pig Download and installation:

1. Download Pig:

Download Pig from "https://downloads.apache.org/pig/pig-0.17.0/"

2. Add the environment variable for Pig:

3. Go to C:\pig-0.17.0\bin and open pig (Windows Command Script)

set HADOOP_BIN_PATH=%HADOOP_HOME%\libexec

4. Open Windows Powershell and type "pig –x local" and check whether pig grunt appears.

Pig is successfully installed.

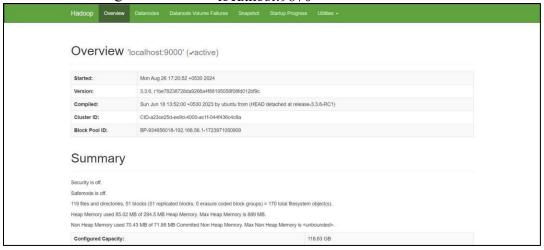

Create UDF:

1. Start Hadoop services:

Open command prompt as an administrator

start-dfs.cmd start-yarn.cmd

2. Open the browser and go to the URL "localhost:9870"

3. Create a text file "sample.txt":

4. Create a Directory in HDFS and copy the Input File to HDFS

hdfs dfs -mkdir /UDF

hadoop fs -put C:/Users/user/Documents/Pig/sample.txt /UDF

C:\hadoop\sbin>hdfs dfs -mkdir /UDF

C:\hadoop\sbin>hadoop fs -put C:/Users/user/Documents/Pig/sample.txt /UDF

- **5.** Create a Python file "uppercase_udf.py": # uppercase_udf.py def uppercase(text): return text.upper() if __name__ == "__main__": import sys for line in sys.stdin: line = line.strip() result = uppercase(line) print(result)
- 6. Create a Directory in HDFS and copy the Input File to HDFS

hdfs dfs -mkdir /UDF/udfs

hadoop fs -put C:/Users/user/Documents/Pig/Uppercase udf.py/UDF/udfs

C:\hadoop\sbin>hdfs dfs -mkdir /UDF/udfs

C:\hadoop\sbin>hadoop fs -put C:/Users/user/Documents/Pig /Uppercase udf.py /UDF/udfs

7. Create pig file "UDF.pig":

```
### Tile Edit Format View Help

--- udf_example.pig

--- Register the Python UDF script

REGISTER 'hdfs:///UDF/udfs/Uppercase_udf.py' USING jython AS udf;

--- Load some data

data = LOAD 'hdfs:///UDF/sample.txt' USING PigStorage(',') AS (id:int, name:chararray);

--- Use the Python UDF to convert names to uppercase

uppercased_data = FOREACH data GENERATE id, udf.uppercase(name) AS uppercase_name;

--- Store the result

STORE uppercased_data INTO 'hdfs:///UDF/output' USING PigStorage(',');
```

8. Execute Pig file

pig -x mapreduce C:/Users/user/Documents/Pig/UDF.pig

```
2024-08-26 19:03:11,501 [JobControl] INFO org.apache.hadoop.mapreduce.lib.input.FileInputFormat - Total input files to process : 1
2024-08-26 19:03:11,502 [JobControl] INFO org.apache.pig.backend.hadoop.executionengine.util.MapRedUtil - Total input paths to process : 1

```

9. View the Output

hdfs dfs -ls /UDF/output hdfs dfs -cat /UDF/output/part-m-00000

```
C:\hadoop\sbin>hdfs dfs -ls /UDF/output
Found 2 items
-rw-r--r-- 1 user supergroup 0 2024-08-29 22:12 /UDF/output/_SUCCESS
-rw-r--r-- 1 user supergroup 27 2024-08-29 22:12 /UDF/output/part-m-00000
C:\hadoop\sbin>hdfs dfs -cat /UDF/output/part-m-00000
1,JOHN
2,JANE
3,JOE
4,EMMA
```

- **10.** Once the map reduce operations are performed successfully, the output will be present in the specified directory.
- "/UDF/output/part-m-00000"

RESULT:

Thus, UDF in Apache Pig has been created and executed in MapReduce/HDFS mode successfully.
